Guest Houses 3.0 in the Verholy Relax Park

Guest Houses 3.0 are the new type of rooms in the hotel and recreational complex Verholy Relax Park. Thanks to their patio and the increased area of fully panoramic glazing, they are maximally integrated into the surrounding pine forest. They are built from lightweight metal frame structures, standing on a screw base instead of the usual solid base. This technology avoids damaging any trees or their root system. The interior floors are tiled and equipped with water heating, the walls are covered with plywood from veneered oak, and the ceilings and terrace feature larch plates. For the finishing, a natural color scheme as well as natural materials were used. The cozy patio allows guests to immerse themselves into the secluded nature in privacy.
